SONAKSHI SAXENA

+91 63963-61055 · *Bhopal, MadhyaPradesh* · *saxenasonakshi14@gmail.com*
linkedin.com/in/sonakshi14saxena · *github.com/sonakshi14saxena*

EDUCATION

VIT Bhopal University Bhopal, Madhya Pradesh
B.Tech in Computer Science Engineering (AI & ML) *2023 – Present*
Current CGPA: 8.87

TECHNICAL SKILLS

Languages: Java,Python,SQL(MySQL)
Backend& Libraries: Streamlit,Pandas, Microsoft Copilot, Claude, Gemini
Tools & Infrastructure: Git/GitHub,VS code Gemini API, Supervised/ Unsupervised/Reinforcement Learning, Machine Learning, Generative AI, Prompt Engineering ,Data Structures & Algorithms,Object Oriented Programming, Operating System, Computer Networks

EXPERIENCE

Stock Vertex Ventures
Quant Intern *11 May 2026 – 24 June 2026*

- **Engineering Financial Data:** Solved 25+ real-world problem statements related to Pandas data manipulation, cleaning, and transforming large volumes of financial data for 50+ Nifty 50 companies.
- **Deployment of Dashboards:** Built a specialized investment dashboard for parsing JSON data, classifying 70+ companies based on sectors, amount invested across multiple funding rounds, and manufacturing capacities.

PROJECTS

Stock Analysis Dashboard | *Python, Streamlit, Gemini LLM, Github* **[StockAnalysis]**

- Manual parsing of unstructured customer files and data comparison created operational bottlenecks and required extensive weekly manual compliance checks.
- Developed a Streamlit dashboard integrating Google Gemini API (Structured Outputs) for automated extraction and built a Pandas-based validation engine to cross-reference client data against the database for non-compliant bookings.
- Increased data extraction speed by 40% with 95% accuracy, while fully automating validation to save the fulfillment department 15+ hours weekly.

BrieflyAI | *Python, Streamlit, Gemini API* **[BrieflyAI]**

- Manual analysis of long PDF documents and YouTube transcripts was excessively time-consuming, while LLM context window limits and high token costs hampered interactive Q&A.
- Built an automated transcript summarization tool using Streamlit and Gemini API, constructing a 30,000-character data pipeline with specialized prompt engineering and session state caching.
- Reduced transcript analysis time by 95% (from minutes down to under 10 seconds), ensured 100% consistent output formatting, and cut API token usage by 50% during interactive Q&A.

FaceBlur | *Python, OpenCV, MediaPipe, Streamlit* **[FaceBlur]**

- Manual masking of sensitive faces in NGO media was inefficient and prone to privacy breaches, requiring a scalable automated solution.
- Developed a real-time Computer Vision web application using Python, OpenCV, MediaPipe, and Streamlit to detect faces and apply instant blurring to live video feeds.
- Automated 100 percent of the privacy workflow, processing video at 30+ FPS with sub-millisecond inference time, and ensuring a zero-data-retention environment.

CERTIFICATIONS

- IBM AI Professional Certificate
- NPTEL Cloud Computing Certification
- NPTEL IoT Certification
